

SEALING PROFILE FOR CHANNELS EPDM

Sealing profile for doors and panels. The special shape creates a balanced seal between frame and seal – and between seal and door. The side of the profile is equipped with lips allowing for movement and ensuring that the seals stays in the channel when the door is opened. This ensures an even pressure along the seal.

The profile work just as well during positive or negative pressure and can be used in 90° corners without the need for cutting. The symmetric design makes mounting easy.

MATERIAL
Profile: EPDM

P/N	H-dimension	Compressed length (A)
4300-0500-1810	18 mm	16-17 mm
4300-0500-2010	20 mm	18-19 mm
4300-0500-2210	22 mm	20-21 mm
4300-0500-2410	24 mm	22-23 mm
4300-0500-2610	26 mm	24-25 mm
4300-0500-2810	28 mm	26-27 mm
