

# VISION INSIDE CLASSIC

The system is mounted/installed inside the sealing area. When closing the swing handle, the upper flat rod moves upwards and the lower rod moves downwards. For three-point locking, a standard cam can be used on the control mechanism with an adapter. Note that our latching rods fit both control mechanisms with E-clips and Quick-fit connectors. The flat rods are ordered separately and upon request.

**MATERIAL**

**Control mechanism:** Zinc die cast, zinc plated or zinc + passivation + sealer or glass fibre reinforced polyamide (PA6GF30)

**Rod:** Steel, zinc plated

**RELATED PRODUCTS**

**Handles:** 1-002.02, 1-005.10, 1-006.50, 1-004.04, 1-004.05, 1-006.60, 1-002.01, 6-010, 1-002.03, 1-006.01, 1-006.03, 1-007, 1-002.08

**Needed components for a complete system:** 1-008.57

**Cams:** 2-481

**Accessories:** 1-008.13
